MongoDB / SQL (MySQL & SQLite)

WordPress

Firebase

HTML & CSS / Tailwind

Jest / Vitest

Version control (Git)

LANGUAGES

English - Native Speaker

German - Native Speaker

PROJECTS

MuscleQuest— Fitness mobile app

2024 | TypeScript, React Native, Expo, SQLite, Firebase

I am currently developing a local-first workout tracker app that combines all the features I have been looking for in existing apps that often aren't available. My main goal is to make striving for self-improvement an enjoyable experience, so I plan to gamify the app by adding RPG elements.

Personal Website

2024 | TypeScript, React, Tailwind CSS, Gatsby

The portfolio website that I designed and built.

Food Finder— Restaurant finder web app

2024 | TypeScript, React, Firebase, Maps API, MUI, Vite

A front-end web app built with React, Firebase and Maps/Places API. It aims to help users find nearby restaurants based on their preferences and location.

Blog— Full-stack blog

2023 | JavaScript, React, Bootstrap, Node.js, Express, MongoDB

A full-stack blog application built with React, Bootstrap, and a backend API running on Node.js and Express with MongoDB. The project enables users to register, create, edit, delete posts, and recover passwords through email. The frontend fetches data from the backend API to deliver a seamless blogging experience.

Top 100 Music Time Machine — Billboard to Spotify Playlist Generator

2023 | Python, BeautifulSoup, Spotipy

I developed a script to fetch Billboard Hot 100 charts and create Spotify playlists, demonstrating my proficiency in Python and API integration.
